Churn Risk Detected — High-LTV Segment

Customers with LTV above \$480 who haven't placed an order in 28+ days represent 6.2% of your active base this week (↑3.1% vs last week). This segment — primarily repeat buyers of the Spring collection — shows a pattern consistent with seasonal disengagement before reactivation.

Affected accounts: 38 customers Estimated MRR at risk: \$1,820/month.

ACTION: Send a personalized reactivation email to the 38 high-LTV customers with 0 orders in 28 days. Include a time-limited free shipping offer. Execute before Thursday.

Upgrade Opportunity

Repeat Buyer Segment Ready to Increase AOV

22 customers have placed 4+ orders in the last 60 days with an average AOV of \$142. Their last order was below their historical average by 18%, suggesting willingness to spend more with the right prompt. Combined potential revenue uplift: \$1,340/month.

ACTION: Trigger a product recommendation email to these 22 accounts featuring items in the \$160–\$200 range, cross-referenced with their category history. Window: this week only.

Power User Cohort Identified

47POWER
BUYERS**2.8×**AVG ORDER
VS BASE**\$12,640**COMBINED
LTV**0%**CHURN
LAST 90D

47 customers placed 6+ orders in 12 weeks, with an AOV 2.8× above the store average and a combined LTV of \$12,640 — representing 18% of total revenue from 4.2% of active customers. Zero churn in this cohort over the past 90 days.

ACTION: Trigger a personalized VIP outreach to these 47 accounts this week. Offer: (a) early access to the Summer drop, or (b) a loyalty reward. Expected uplift from retention: \$2,100–\$3,200 MRR.

Express Checkout: High-Value Feature, Low Conversion (11%)

Customers who complete checkout via express method show 2.1× higher D30 repeat rate and 54% lower cart abandonment than standard checkout.

Only 11% of eligible customers have used it. Adoption dropped –7% vs W-1 among mobile users — the highest-risk segment for single-session exits.

**ADOPTION
RATE**

11%

Customers using express checkout account for 31% of total weekly revenue despite representing only 11% of active buyers. If this adoption rate remains unchanged over 4 weeks, an estimated \$3,200/month in recoverable revenue will continue to exit at the cart stage.

Add a contextual prompt on the cart page for mobile users highlighting express checkout. A/B test button copy: "Pay in 10 seconds." Estimated impact: +15–20% adoption in 30 days, translating to \$640–\$850 in recovered weekly revenue.

5- Metric Benchmark Table

Metric	Last week	This week	Δ%	Stage benchmark
DAU	1,180	1,240	+5.1%	—
Stickiness (DAU/MAU)	79%	72%	−8.9%	> 35% (growth)
D7 Retention	37%	32%	−13.5%	> 15% (growth)
Churn rate	4.1%	3.8%	−0.8%	< 5% (growth)

D7 Retention (−13.5% WoW) is the primary risk signal this cycle. Stickiness is compressing in parallel, suggesting the same cohort driving disengagement. DAU growth (+5.1%) creates a temporary offset, but if D7 retention remains below the growth-stage benchmark (>30%) for another two weeks, revenue pressure will compound regardless of acquisition volume.
